

COMPUTER PROCESSING OF ASIAN SPOKEN LANGUAGES

Editors

Shuichi ITAHASHI (National Institute of Informatics, Tokyo, Japan)

Chiu-yu TSENG (Academia Sinica, Taipei, Taiwan)

Contents

Preface

Foreword, H. Fujisaki

1. Introduction
 2. Outline of some Asian languages
 3. Data centers of speech corpora
 4. Speech corpora of Asian Languages
 - 4.1 Monologue
 - 4.2 Dialogue, conversation and meeting speech
 - 4.3 In-car speech
 - 4.4 Language learners' speech
 - 4.5 Emotional/expressive speech
 - 4.6 Prosodic corpora
 - 4.7 Multilingual corpora
 - 4.8 Code-switching speech corpora
 - 4.9 Sound and noise database
 5. Performance evaluation of synthesizers and recognizers
 - 5.1 Standards of performance evaluation
 - 5.2 Performance comparison
 6. Annotation and labeling
 - 6.1 Phoneme labeling
 - 6.2 Prosody labeling
 7. Software tools
 - 7.1 Speech processing
 - 7.2 Speech recognition
 - 7.3 Speech analysis and synthesis
 8. Orthographic transcription and Romanization of some Asian languages
 9. Conclusion
- Appendix
Outline of Oriental COCOSDA activities

Long-awaited volume on the speech information processing research in Asia

This book contains recent research papers by 120 speech researchers in Asia. It makes possible to overview the trends of speech processing research in Asia

Recommendation:

- Prof. Lin-shan Lee, National Taiwan University -

This book serves as a tribute to how the problems of computer processing of the languages spoken in Asia were overcome and as an inspiration for speech technology development in the future. It is a one-of-a-kind reference resource for the entire speech community as Asia continues to play a much more active role in the international arena.
